Speaking Independent Tasks 口语独立题➤ **Task 1****[Question]**

If you have a chance to work in a big company, which of the following two choices would you prefer?

---a big company giving employees freedom to independently plan and finish assignments

---a big company giving clear solutions and procedures to tell you what you should do and should not.

[Response]

If I was working for a really big company, I would definitely prefer to work for one that gives you the freedom to work on your own and finish your own assignments.

First off, it would just make my work feel more satisfying. I always prefer a project if I can choose my own topic. So, for example, my favorite

assignment in school was when my teacher let us give a speech on anything we wanted. I chose to talk about music because I really care about it, and then I really enjoyed the assignment

Secondly, I think it's even better for the company because they're making use of everyone's ideas and not just the boss's. It's like when you're trying to figure out any problem with your friends, it's always better to have input from everyone rather than just one person's idea.

Writing Independent Task 写作独立题

[Question]

Nowadays a lot of students use technology like computers and smartphones in classrooms. Some people believe that we should not limit the time that students spend on these devices because it is an efficient way of learning. Others claim that we should limit students' use of these devices to one hour per day. Which option do you agree with?

[Response]

Technology is all around us, all the time. A few decades ago, schools tried to discourage students from using computers or phones, but lately educators have accepted that technology is actually a critical part of every

students' future. Therefore, some people have begun to suggest that schools allow students to use their phones and computers all the time in class. However, I disagree. I believe that schools should limit the use of technology in class.

The main reason I believe this is because it's so important for people to learn social skills while they're still young. I recently read a report in National Geographic that said technology is actually changing our brains; people who spend too much time texting rather than talking actually have lower development in the speech part of the brain. I think that's a horrible tragedy. It is important to learn skills like math, science, and even technology in school, but it's just as important that young students learn how to speak to each other, how to be kind, and how to grow up with manners.

In addition, it's important that students learn how to think for themselves. It's likely that they'll always have access to some sort of computer in the future, but they'll produce better work if they understand how to actually do the work themselves. A great example of this is simple math processes like multiplication and division. When I was young, my teacher had us practice doing this on paper, so I learned to be able to quickly multiply and divide in my mind. However, now I just use my phone's calculator for math all the time, and I find that I'm no longer able to do even simple math in my mind. Schools should have students learn how to solve problems on their own first, and then

allow them later on to solve problems with technology.

Finally, there's nothing lost with restricting the use of technology at school because students will still learn how to use technology when they're at home. Kids these days spend plenty of time on their phones and computers, so they will still grow up being masters of those important tools. I think I'm a pretty good example of how the average student lives, and I spend multiple hours on my phone or computer every day after class. Therefore, there's no reason that I need to also be on my phone while I'm in class.

In the end, technology is important, but it's also important to develop ourselves by putting the technology down for a bit. I believe schools can help students achieve a greater benefit by restricting how much time they spend with technology in class.

范文分析

高分词组

discourage students from

不鼓励学生接触...

a critical part of every students' future

每个学生未来的关键部分

limit the use of technology in class

在课堂上限制科技的使用

have lower development in ...

...发育不良

produce better work	做得更好
quickly multiply and divide in my mind	在我的脑海里快速地加减乘除
grow up being masters of those important tools	成长为那些重要工具的主宰
there's nothing lost with ...	没有什么损失
put the technology down for a bit	稍微放下科技工具一段时间

实用句型

1. **A great example of this is** simple math processes like multiplication and division.

“A great example of this is...” 这个句子可以写在举例论证的开头，表达的意思是“一个很好的例子是.....”，接下来顺势具体讲一下例子。

2. **Therefore, there's no reason that** I need to also be on my phone while I'm in class.

“Therefore, there's no reason that” 的意思是“因此，没有理由...”，表示没有道理我们要做某件事，可以用在 disagree 的写作篇章里。

篇章结构

The main reason I believe this is because it's so important for people to learn social skills while they're still young.

In addition, it's important that students learn how to think for themselves.

Finally, there's nothing lost with restricting the use of technology at school

because students will still learn how to use technology when they're at home.

在本篇文章中，每个主体段的第一句都是直接点明作者的分论点，这样的结构直截了当、简洁明了，读文章的人一下子能看清楚作者的写作意图。
